

i-Chain Fixed Asset Management

Issue 3, February 2019

Make your love last with a fixed asset management system that works!

i-Chain's Asset Management System **i-AMS** provides a central database and simple web browser interface for the recording of detailed information on all fixed assets.

i-AMS is a complete financial asset system, managing the full asset lifecycle, that is easy to use and provides a host of features for Financial Reporting.

i-Chain has transformed its asset management process through a new winning strategy that has improved service delivery, risk management, and investment.

With the ease of use and implementation in mind, **i-AMS** is a pure web-based, in-house developed Asset Management System that offers you the complete asset management functions and the best financial features of the asset life cycle from the acquisition through to disposal. The system is easy to use, fully customizable data fields and reports for your company to comply with GRAP, PFMA, IFRS, and SARBOX regulations and can integrate into any system you need, via our interface portal.

This scalable tool will provide with a structured yet versatile means to integrate with existing systems, whilst its advanced reporting capabilities and user-friendly interface will ensure that users are able to view the movements of assets items quickly and easily.

An Asset Management System that won't overstretch your budget!
